Constraints Toolbar - [link chapt3 stuff here](#), is in ch 3 because button also in snapping section of original toolbar

Particles

Constraints - reactive, RMB other options

Constraints are used to control the motion of one object with another object's motion.

Usage:

- select a scene level object to be controlled

- add the controller object from the scene level to the selection

- press the button to open the Reactive Constraint floating panel

- Maintain Offset to keep the relative location of the constrained object

- select axis - X, Y, Z to determine what position aspect will be constrained

- select axis - Xr, Yr, Zr to determine what rotation aspect will be constrained

- press Add Constraint to create a constraint on the controlled object

- select an object that is being constrained

- press Remove All Constraints to remove all the constraint relationships assigned to the selected item
